DISCOVER
THE WORLD OF
SATTLER

SATTLER DESIGN SELECTOR

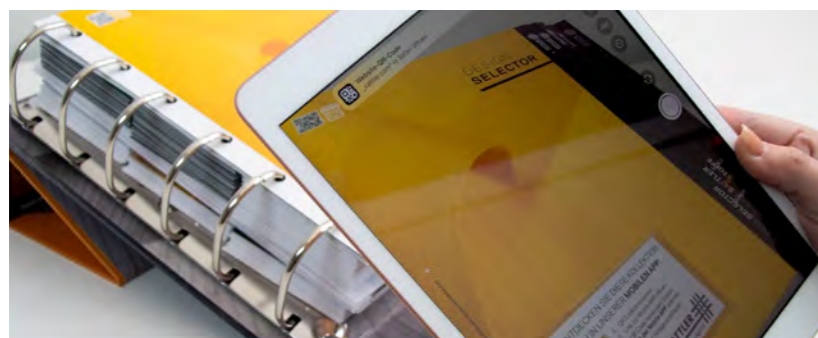

In our **collection book "World of Sattler"** you will find all our current fabric designs sorted by lines of design or by colors to provide a first impression of the appearance and structure of the fabrics. The **Design Selector** will additionally guide you through the applications for these fabrics. Regardless of the system, what matters is to gain a first impression of how the fabric will look like when

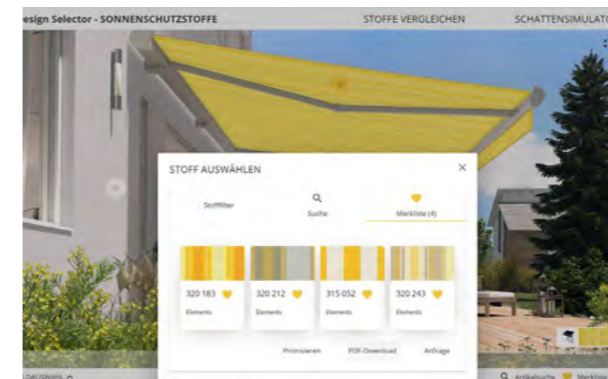

installed. This is easy and simple with the Design Selector. You can access the collection and the Design Selector with your cell phone or tablet, **both are available online.**

This is how it works: scan the code on the front page of the collection (with a QR Reader or cell phone camera), start the application, click on the 'QR Code button' and scan the QR code next to

the fabric. Now you can see the fabric in a **real scene** and you can modify it at your convenience. And if you want to know more about each of the designs, qualities and technical values, just click on the **info button** and all relevant contents and explanatory videos will be available for download.

For more information go to
suntex.sattler.com

SATTLER'S DESIGN SELECTOR WILL HELP YOU WITH THE **PRESELECTION** OF YOUR FAVORITE FABRIC **QUICKLY AND RELIABLY**

Filter, compare, decide and send an inquiry: four simple steps to find the fabric that will embellish your terrace for many years. You will enjoy your Sattler awning for a very long time. This is why it is particularly important to **make the right choice!**

Are you looking for a specific color? Or a particular design? Or you just want a fabric that allows you to sit outside even if it starts to rain?

With **SATTLER's Design Selector** you will find what you are looking for. And thanks to the shadow simulator you will be able to estimate the right dimensions of your awning and to sit under the shade whenever you want.

+ ADVANTAGES AT A GLANCE

- + Easy and intuitive filter features
- + Possibility to adjust the color of the house for more individuality
- + Shadow simulator to support your choice
- + Integrated dealer inquiry
- + Possibility to share via WhatsApp or email
- + Use everywhere as mobile APP

SUN PROTECTION FABRICS

ACRYLIC STAPLE FIBER

A large number of fine acrylic fibers are spun together during the production of **staple yarn**. The result is a highly resistant fabric with a textile surface perfectly suitable to be used outdoors for sun protection.

CBA

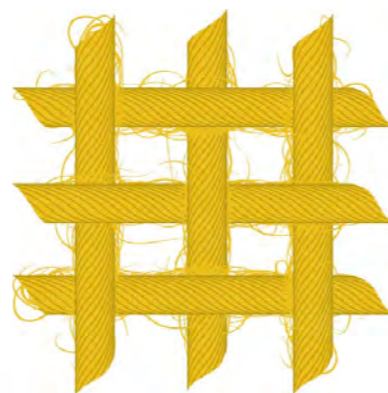

The use of the **Clean Brilliant Acrylic** yarn results in a smoother and denser surface structure of the fabric thanks to its outstanding properties. The innovative acrylic yarns are very smooth and therefore colors have a particularly intense and bright appearance.

ELEMENTS

The **ELEMENTS quality** scores with its fine textile character. Textured staple fiber acrylic yarns are woven together in the warp and weft, which results in a surface with unique haptic effects. All our sun protection fabrics are covered with our special **TEXgard Easy Clean Finish** for weather protection which makes the fabrics perfect for their use outdoors.

100% STAPELFASER

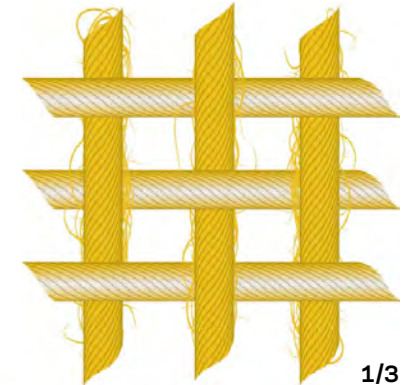

LUMERA

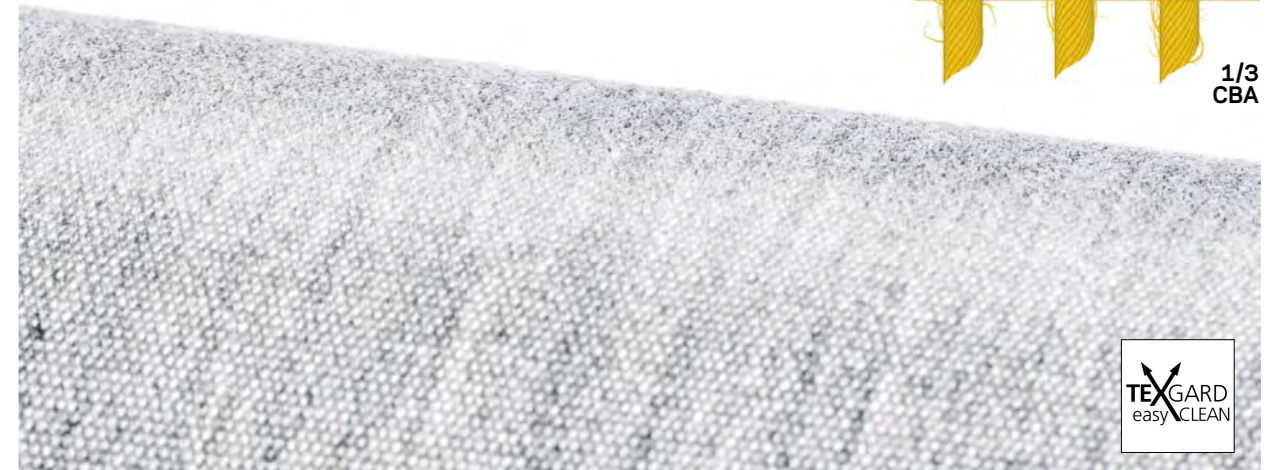

The characteristic feature of our **LUMERA quality** line is the **smooth surface** created by combining staple fiber in the warp and brilliant acrylic yarn CBA (Clean Brilliant Acrylic) in the weft. The use of these fibers results in a **smoother and denser** fabric structure. Colors shine even more and the fabric's self-cleaning effect improves ensuring its durability.

2/3 STAPELFASER

1/3 CBA

LUMERA ALL WEATHER

All advantages offered by **LUMERA** are combined in **LUMERA ALL WEATHER** with an even more functional protection for almost all weather conditions from sun to rain. A wafer-thin finish with the intelligent **IPC** coating makes the fabric **waterproof** and yet maintains the suppleness of the fabric.

Keep an eye out for this symbol:

1/3 STAPELFASER

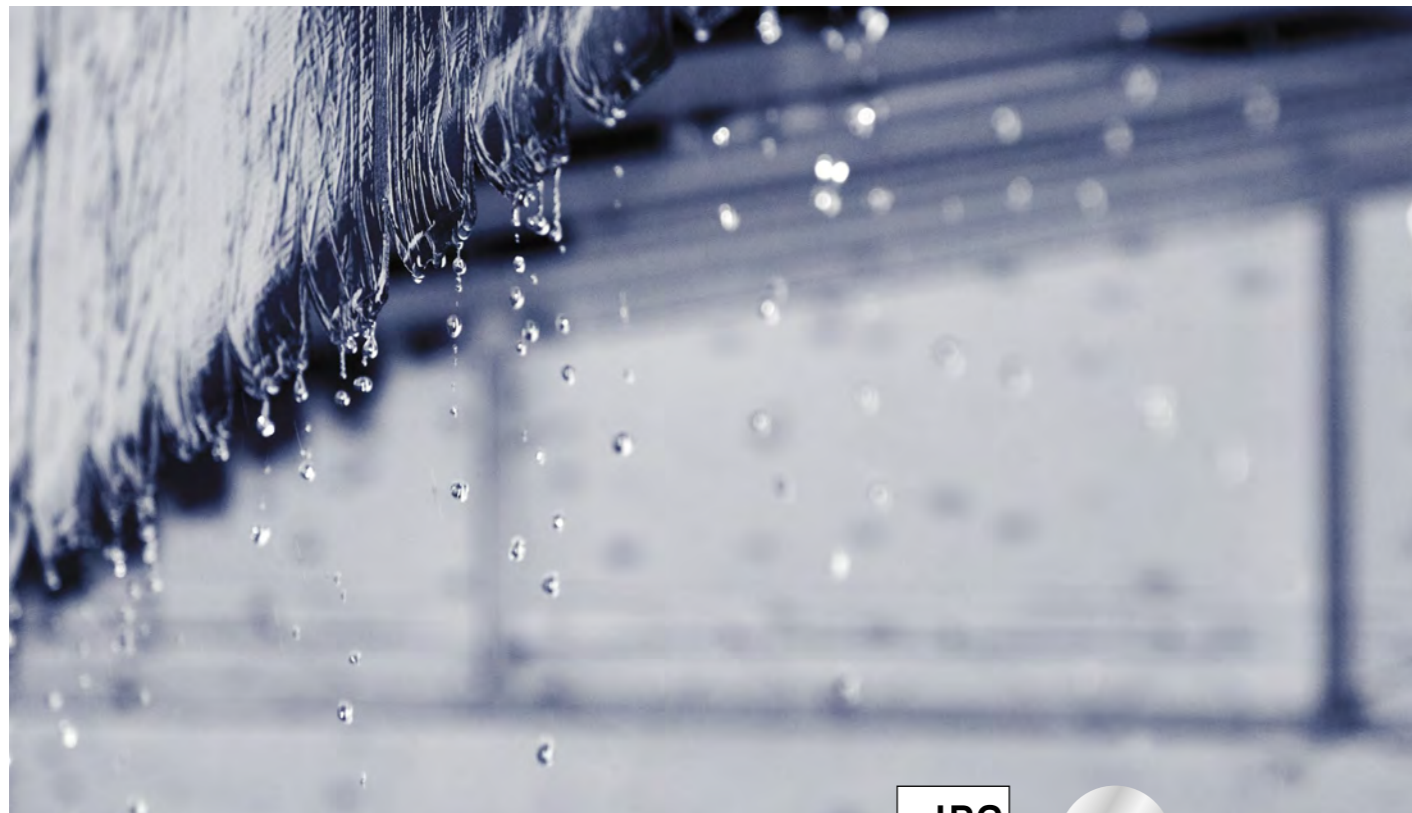

2/3 CBA

READY FOR ANY TYPE OF WEATHER

SPECIAL REQUIREMENTS NEED
SPECIAL AWNING FABRICS

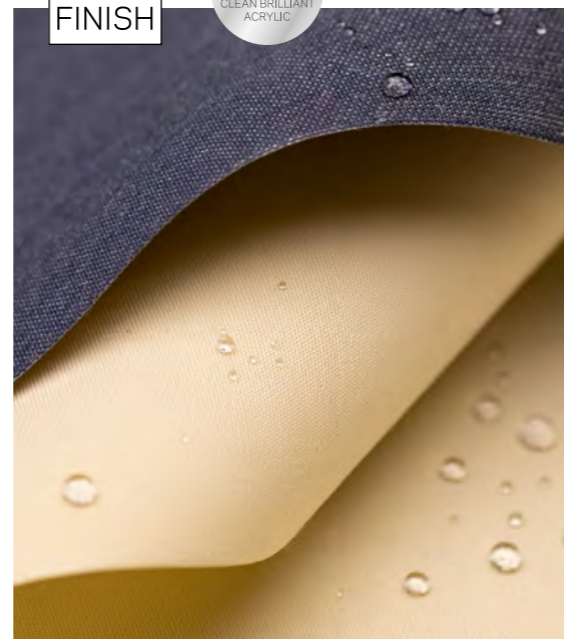

Fabrics made for special requirements. Whatever the weather, awning fabrics with the All-Weather marking are covered with a **waterproof IPC coating** and therefore defy almost any weather condition.

The 100 % solution-dyed premium brand acrylic is UV-resistant and excellently removes water and dirt thanks to its outstanding technical

properties.

All designs of **LUMERA LEAF** as well as selected designs of **LUMERA LANDSCAPE** and **LUMERA SOLIDS** are also available in **LUMERA ALL WEATHER** quality.

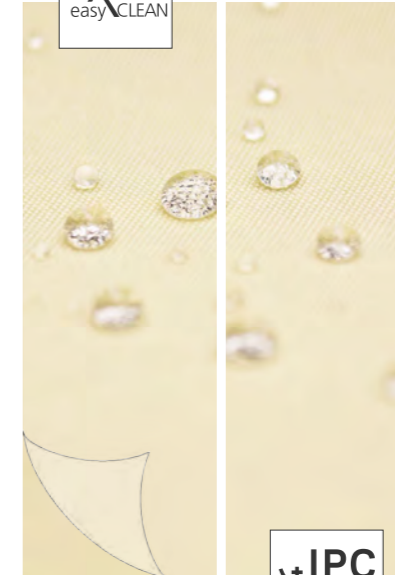

TEXgard EASY CLEAN – Lifelong Protection for Your Awning Fabric

ENSURES A **LASTING IMPRESSION** OF YOUR AWNING FABRIC.

Just like a warm embrace, our TEXgard Easy Clean finish surrounds every single fiber of the fabric. This creates an invisible protection that purposely prevents water and dirt from penetrating the fabric.

The lotus effect transforms into the **TEXgard effect**. Pearls formed by moisture roll off the surface and wash away dirt particles. Thanks to this self-cleaning effect the fabric maintains its appearance and will look exactly the same after many years.

IPC – the intelligent coating

INNOVATIVE PROTECTION COMBINED WITH **TEXTILE SUPPLENESS** IN ONE SINGLE COATING

Sun protection fabrics are exposed to a wide variety of challenging conditions during their use: wind, weather and strong sun rays. The **intelligent IPC finish** offers protection against all these situations. Additionally, to our TEXgard finish, the innovative coating adheres to the fabric providing a protection shield that prevents rain from penetrating the fabric. This invisible layer is extremely light – it doesn't influence the structure thus the fabric remains smooth.

PAN – the Basis for the Best Sun Protection

THE PERFECT BASE: COLORS ARE DIRECTLY INFUSED INTO THE CORE OF THE ACRYLIC YARNS, AS A RESULT OF THE SOLUTION-DYE PROCESS

There is nothing better than consistent quality. All fabrics in the "World of Sattler" collection are woven from **100 % solution-dyed brand acrylic**. This means that color pigments are infused into the fiber before they are spun into yarn.

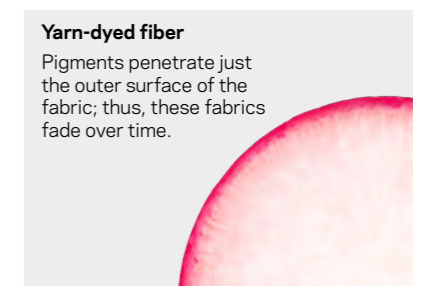

This results in **uniformly dyed yarns, resistant to harmful UV rays for a long time**, thus retaining their color brilliance for years. In the next processing stage, outstanding fabrics are woven from solution-dyed acrylic fibers.

Our fabrics are exceptionally durable and retain their vivid colors, even after exposure to numerous hours of sun. Quality is present in every single fiber. This makes the difference that you can see and feel. Due to the **textile character**, our fabrics feel pleasantly warm and soft.

100 %
PREMIUM
ACRYLIC

Spun-dyed acrylic yarn
Color pigments infused all the way to the core of the fiber.

Yarn-dyed fiber
Pigments penetrate just the outer surface of the fabric; thus, these fabrics fade over time.

ENVIRONMENT AND ENERGY

SUN PROTECTION IS ALSO CLIMATE **PROTECTION**

extile sun protection helps to save energy by capturing heat and making air conditioning partially unnecessary. An important criteria for this is the amount of light energy that passes through the fabric. This is why all our designs are regularly measured, ensuring that at least 70 % of the incident energy is captured.

Sustainable to the smallest fiber

Topics such as an intact environment, climate protection and a responsible use of resources are always integrated throughout our manufacturing process and beyond. The certifications according to the international quality management norm ISO 9001 and to

the OEKO-TEX® Standard 100 are a must for us. Our products also comply with the requisites of the REACH regulation. This means all chemicals we apply fulfill the strictest criteria of the European Union.

Acting with responsibility - maintaining the balance between ecological and economical objectives

At our production site in Austria, this includes consistent environment management according to ISO 14001. Our fabrics speak a sustainable language: they are not short life, disposable articles, but products that have been manufactured, tested and released for long-lasting use outdoors.

Some examples of our sustainable actions:

- 100 % green electricity and generating large part of our own power demand through photovoltaic systems
- energy-optimized washing and impregnation processes
- no use of surfactants
- modern machines, which save 15 % of the water consumption previously needed

UV PROTECTION FOR YOUR HEALTH

UV PROTECTION: SUNNY AND SHADY SIDES

Sunlight is important for health. The right amount has plenty of positive effects, but at the same time it can have harmful effects on our body. Sunlight is composed of visible, infrared and ultraviolet light. Ultraviolet light, on the one hand, is composed of UVA and UVB rays. The high-energy UVB rays attack the pigment-forming cells in the upper skin layer causing sunburn, skin damage or even cancer. UVA rays have a longer wavelength and penetrate deeper in the skin damaging the connective tissue and leading to faster aging.

The UV value calculated by an independent testing institute indicates how much of the harmful UV rays can be blocked by sun protection textiles thus they cannot reach the skin.

Uncompromising, outstanding protection against UV-rays

All our fabrics are regularly tested and certified according to **UV Standard 801**. This means they are not only tested when new, but also after exposure to the most diverse, real conditions such as extreme sun exposure, as well as in a wet or stretched state. This way we guarantee that **not more than 2.5 % of the harmful UV rays** pass through any of Sattler's fabrics.

This characteristic is an expression of our proven quality:

What does the Ultra Violet Protection Factor stand for?

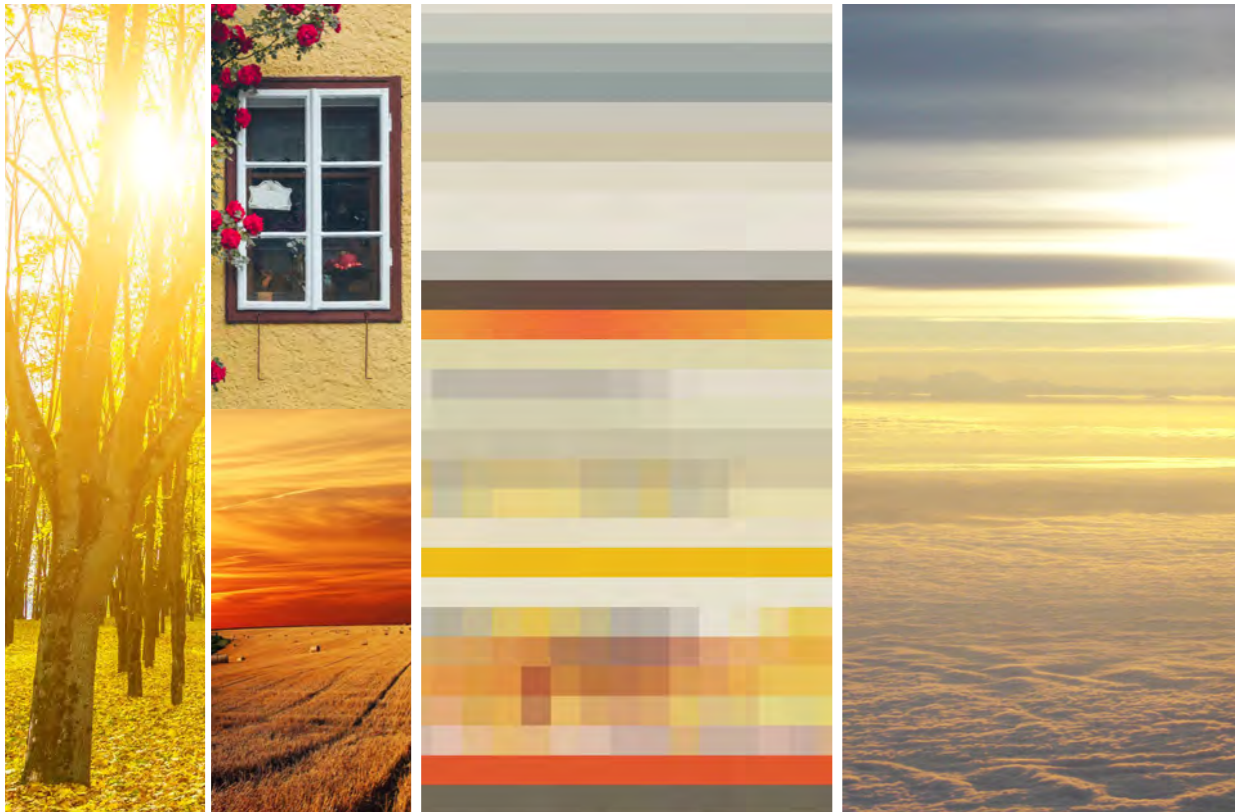

The UPF is a special orientation value for textiles, similar to the SPF used for sunscreen. With a value range from 2 to 80, this factor helps to estimate how long the certified sun protection textile will increase the sun protection of human skin directly exposed to sun rays. This self-protection time depends on the skin type.

Learn more in our video on YouTube.

REGIONAL DESIGN

REGIONAL IDENTITY - REFLECTED
IN SATTLER'S DESIGNS

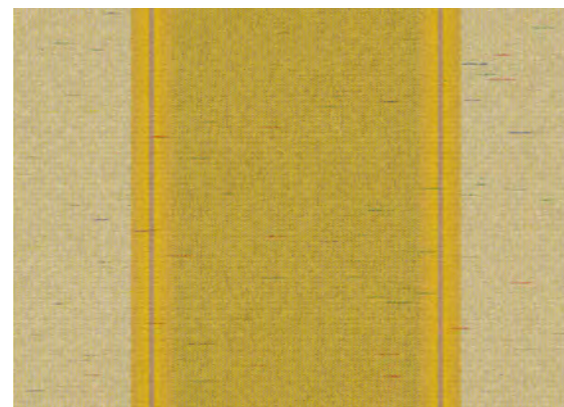

The unique interplay of light and shade, nature climate, architecture and colors in all possible intensities – every region has its own special characteristics and charms. But how can these characteristics be reflected in designs? This is exactly the question we deal with when it comes to design and product development of fabrics for new collections.

Sattler's awning designs represent a reflection of our world. This is why fabrics are not just textiles. Each fabric is a precise snapshot of the

environment surrounding us. The great art of this process is to recognize and abstractly perpetuate the identity and dynamics of each region.

For the composition of colors and materials, we use the regional characteristics as basis and respond to consumer demands from different parts of the world. This is how our special country collections emerge.

COLOR & DESIGN TRENDS

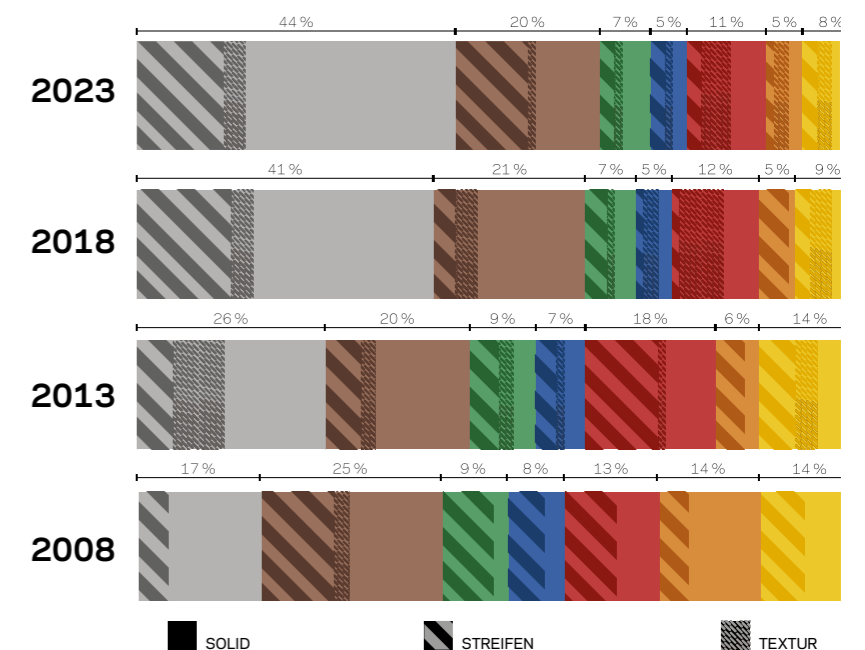

HOW DO TRENDS DEVELOP?

The development of our designs is the sum of extensive and thorough research combined with the latest results of trend analysis and a deal of creativity.

As part of the design development, we focus on signs of the times and also analyze social trends in detail. Our designers identify future trends in cooperation with internationally recognized trend agencies.

They are inspired by nature, architecture, arts and crafts – they get further influences from the past and early historical developments. We want to bring yesterday's spirit together with the trends of tomorrow to invoke extraordinary interpretations.

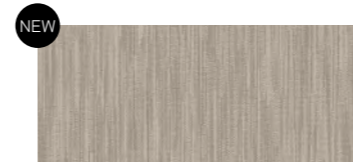

QUALITY LUMERA

No light, no color. With LUMERA, colors shine under a different light.
Light surrounds us day and night. Be it bright sunshine, moonlight or the great variety of colors of the artificial lighting in the city and countryside. The smooth surface adds brightness to the fabrics that form Lumera's quality- its luminosity is reflected in our special designs.

Nature shows us how diverse color worlds and tone-in-tone variations can be. LUMERA LEAF features entirely new textures inspired by the rich flora and fauna and the clash of light and shadow. This is how spirited color spectra of wild-growing forests are transferred to fabrics with yarns that are full of effects.

LUMERA 3D SURFACE

The LUMERA 3D SURFACE line perfectly illustrates how fabrics can be designed three dimensionally. Natural surfaces, as we find them everywhere on Earth, such as gold, granite, or lime- have been reproduced here in a fascinating and tangible way. The results are outstanding fabrics in earthy, stony or metallic tones with an incomparable, tactile structure.

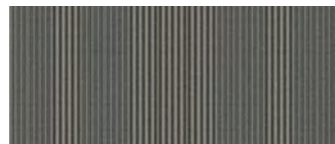

LUMERA LANDSCAPE

With the LUMERA LANDSCAPE line we are literally expanding our horizon. We lift our eyes from the small details and look ahead into the distance - where everything blurs into a harmonious whole. This color shades that interact with each other and in combination with the characteristics of different landscapes with rich and varied vegetation are embodied in textured stripes.

LUMERA
SOLIDS

#CBA
CLEAN BRILLANT
ACRYLIC

The LUMERA SOLIDS line proves with its impressive style that monochrome is not the same as drab. Popular and current trend solid colors go hand in hand with delicate textured surfaces. The monochrome designs are brought to life by adding fine structures to the fabrics. This is how unique elegant discretion is created.

PROJECTS COLLECTION

Discover the perfect qualities for your projects in our PROJECTS collection. Whether it's fire protection standards or special weather resistance you're looking for – in this collection, you're guaranteed to find the right fabric for your interior design requirements. With our PROJECTS collection, we offer you a comprehensive range that includes flame-retardant, particularly weather-resistant and reflective textiles for sun, privacy and glare protection, to name but a few.

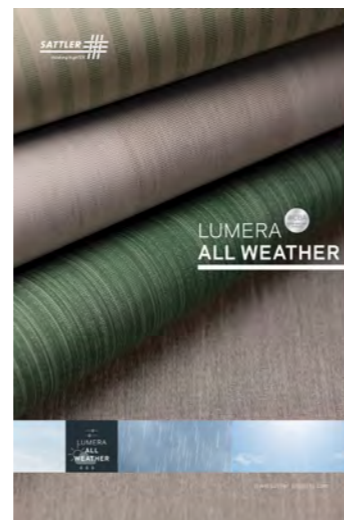

ELEMENTS SPHERE

For special sun protection on the terrace: ELEMENTS SPHERE, the semi-transparent, softly cascading fabric with a pleasant feel for use as an outdoor curtain on your terrace, conservatory or pergola. Suitable all year round thanks to its solution-dyed acrylic.

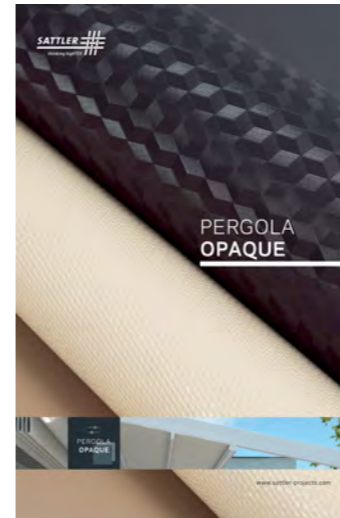

FIREMASTER

Fire retardant – everywhere, where required. Firemaster is particularly suitable for applications where stringent fire safety standards must be fulfilled, without having to renounce to modern colors or delicate textures.

LUMERA ALL WEATHER

Special requirements need special awning fabrics. No matter what your plans are. ALL WEATHER shields you effectively from sun and rain with its special coating. Make the best of your leisure time! Regardless of the weather.

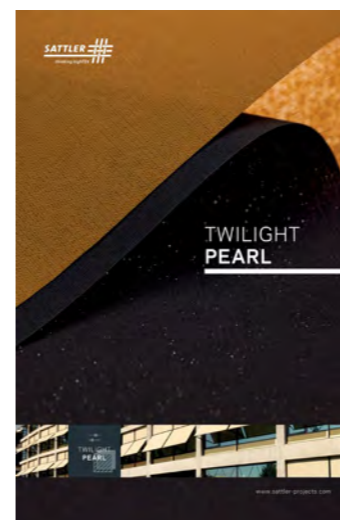

PERGOLA OPAQUE

Be it pergola, basket awnings or canopies, the double coated fabrics of our Pergola Opaque quality are not only mildew resistant and highly dirt repellent, they are also available in a wide range of finely tuned colors and special embossing on one side.

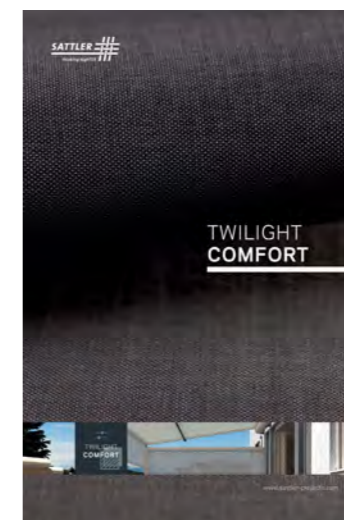

TWILIGHT COMFORT

TWILIGHT COMFORT – the special quality when you want transparency but don't need PVC. 100% spun-dyed acrylic combined with polyester filament ensures optimum tensile forces, especially with ZIP systems.

TWILIGHT PEARL

Color plays increasingly a key role in the creative design of facades. Through the use of color as an element, every building is charged emotionally and the architecture becomes even more tangible. The Twilight PEARL collection is the optimal product for high demands.

VALORA PERGOLA

Its special textile construction makes this light, flexible base fabric ideal for use whenever large systems are needed to provide shade for stunning terraces. Finished with an IPC coating, the VALORA PERGOLA is waterproof, thus inviting you to while away the hours outdoors even in bad weather.

RELIABLE ON THE HIGH SEAS

ONLY THE PERFECT PROTECTION
CREATES **TRUE VALUES**

AT HOME IN THE WORLD

LIGHT, WATERPROOF QUALITIES
FIT FOR ANYTHING

What makes Nautex so special are the best materials, the best processing and the cutting-edge technologies. Of course, certifications according to ISO 9001 and ISO 14001 are a must. All Nautex products have been developed for use under extreme conditions all around the world. Regardless of whether it is employed on a small lake in Austria or in the challenging storms in the Atlantic Ocean - Nautex always protects your boat. Sattler's state-of-the-art production facilities allow us to offer all types of fabric from a single

source - from uncoated solution-dyed acrylics and coated solution-dyed acrylics to PVC-coated polyester. Our broad product range is able to fulfil all requirements that occur around a boat. This makes Sattler the perfect partner for anybody wanting to purchase high-quality material from a single source - guaranteeing the best performance, flexibility and competence.

For more information visit
www.sattler-nautex.com

A variety of qualities for many applications in the Camping Caravan area inspires with extraordinary technical properties and different materials.

We offer the right fabric for roof tents or tent trailers, glamping applications, pop-up roofs and awnings. Acrylic, polyester and PVC, for roof, side or outdoor furniture - you are looking for a functional textile, Sattler offers it.

For this field of application Sattler offers fabrics made of polyacryl, polyester, cotton and cotton blends and if required, our qualities are also available with flame-retardant finishing.

OUTDOOR FABRICS WITH WOW FACTOR

OUTDURA - THE PREMIUM BRAND
FOR **OUTDOOR FABRICS**

SATTLER
FLEXBOOK

Outdura's success story began in the late 90ies. With high quality standards and know how, the brand based in North Carolina has developed itself to be what it is today: one of the leading suppliers of outdoor upholstery fabrics. The brand Outdura unites best quality with sophisticated designs and leaves no wish unfulfilled.

The fabrics are made from 100% solution-dyed branded acrylic and ensure outstanding technical properties regarding light and color fastness,

UV-resistance and durability and are therefore also best suited for umbrella applications. Outdura fabrics, brilliant and beautiful for years to come.
